

Java and Python Piscines

Introduction

We recognize that many internship opportunities require Java and Python skills. Since these skills are not covered during the Common Core, we want to ensure our students are well-prepared for these opportunities. To help you gain the necessary experience, we are opening the Java and Python Piscines to all students who have completed the CC.

Students can choose to work on either the Java or Python Piscine, but not both. These Piscines will be available immediately after you finish the Common Core (Exam Rank 06 and Ft_transcendence).

Piscine Deadlines

-Java Piscine: You have a deadline of 3 months to complete the Java Piscine, starting immediately after finishing the Common Core.

-Python Piscine: You have a deadline of 1 month to complete the Python Piscine, starting immediately after finishing the Common Core.

Please note: These Piscines must be started right after completing the Common Core. If you finished the Common Core several months ago, you will not be eligible to subscribe in these Piscines. However, you can work on these projects after returning from your internship.

Access

Students who want to subscribe in either Piscine should contact one of the Pedago staff members for access. Please reach out to:

- @Hasnaa
- @Lifan
- @Kapitcha
- @Mza7a
- @Ophen

Cheating in Logtime

One of the key benefits that students have at 1337 school is the scholarship. The scholarship is offered to students who are committed to their studies. It provides financial assistance. This support aims to help students focus on their education without the burden of financial stress.

The scholarship comes with certain requirements that must be respected, *such as maintaining a minimum number of logged hours per month and being actively engaged in studies*. The required hours are reasonable and have been set considering all students' circumstances. Any student who is active and committed to their studies should be able to meet these requirements without difficulty.

Unfortunately, this benefit has been misused by some students who manipulate their logtime to gain the scholarship without genuinely studying.

Some methods of manipulation include:

- Using scripts or black screens
- Manipulating mouse and keyboard activity
- Accumulating logtime for someone else
- ...

Additionally, we consider the following actions as cheating in logtime:

- Watching movies
- Watching football
- Playing games on the iMacs
- Sleeping in Cluster

Sanctions for Cheating:

Keep in mind that any attempt at cheating will lead to sanctions:

- First time: 3 month suspension from the scholarship
- Second time: Permanent suspension from the scholarship

Clusters are dedicated to learning, and using the iMacs in this manner is inappropriate. By engaging in such actions, you are preventing your peers who want to work on their school projects from benefiting from school resources.
